CLAIMS

1. A method of cleaning a surface, comprising applying water containing no
5 more than 1 ppm gas to the surface to disperse or dissolve dirt on the surface
in the water.
2. A method according to claim 1, wherein the water contains no more than
about 0.9 ppm gas.
- 10 3. A method according to claim 1, wherein the water contains no more than
about 0.3 ppm gas.
4. A method according to claim 1, wherein the water contains no more than
15 about 3 ppb gas.
5. A method according to claim 1, wherein the water contains no more than
about 0.3 ppb gas.
- 20 6. A method according to any one of the preceding claims, wherein the surface is
on an article and wherein the method comprises cleaning the article in the
water in a container.
7. A method according to claim 6, wherein one or both of the article and water
25 are agitated.
8. A method according to any one of the preceding claims, wherein the water is
applied to the surface by spraying.
- 30 9. A method according to claim 8, wherein the water is sprayed on to the surface
by means of an airless spray system.

- 23 -

10. A method according to any one of claims 1 to 5, which comprises applying multiple streams of the water to the surface to agitate dirt on the surface.
- 5 11. A method according to any one of the preceding claims, wherein the water contains hydrophilic stabilising material to alleviate redeposition of the dirt on the surface.
12. A method according to any one of the preceding claims, which comprises
10 using a stored source of the water containing no more than 1 ppm gas.
13. A method according to any one of claims 1 to 11, which includes de-gassing a source of water to a level of no more than 1 ppm gas.
- 15 14. A method according to any one of the preceding claims, which comprises dissolving hydrophobic dirt on the surface using a non-aqueous solvent, and dispersing the non-aqueous solvent and dissolved hydrophobic dirt in the water.
- 20 15. A method according to claim 14, wherein the non-aqueous solvent is applied to the surface prior to applying the water to the surface.
16. A method according to claim 15, wherein the surface is relatively separated
25 from a liquid body of the non-aqueous solvent prior to applying the water to the surface.
17. A method according to any one of claims 14 to 16 wherein the non-aqueous solvent applied to the surface contains no more than about 10 ppm gas.
- 30 18. A method according to claim 17, wherein the non-aqueous solvent applied to the surface contains no more than about 1 ppm gas.

- 24 -

19. A method according to claim 17, wherein the non-aqueous solvent applied to the surface contains no more than about 0.3 ppm gas.
- 5 20. A method according to claim 17, wherein the non-aqueous solvent applied to the surface contains no more than about 3 ppb gas.
21. A method according to claim 17, wherein the non-aqueous solvent applied to the surface contains no more than about 0.3 ppb gas.
- 10 22. A method according to any one of claims 17 to 21, which comprises using a stored source of the non-aqueous solvent containing no more than 10 ppm gas.
- 15 23. A method according to any one of claims 17 to 21, which includes de-gassing the non-aqueous solvent to a level of no more than 10 ppm gas.
24. A method according to any one of claims 14 to 23, wherein the non-aqueous solvent is hydrophobic.
- 20 25. A method according to any one of claims 14 to 24, wherein the non-aqueous solvent is selected from hydrocarbons, fluorocarbons, chloro-hydrocarbons, silicone liquids and mixtures of one or more of same.
- 25 26. A method according to claim 25, wherein the non-aqueous solvent is selected from dodecane, squalene, hexamethyldisiloxane, perfluorohexane, hexane and mixtures of one or more of same.
27. Apparatus for cleaning a surface, comprising a source of water containing no more than 1 ppm gas and a dispenser for applying the water to the surface.
- 30 28. Apparatus according to claim 27, wherein the surface is on an article and the

- 25 -

apparatus includes a container for receiving the article.

29. Apparatus according to claim 28, which includes an agitator for one or both of the article and water.

5

30. Apparatus according to any one of claims 27 to 29, wherein the dispenser comprises a sprayer.

10

31. Apparatus according to claim 30, wherein the sprayer is part of an airless spray system.

15

32. Apparatus according to any one of claims 27 to 29, wherein the dispenser applies multiple streams of the water to the surface to agitate dirt on the surface.

20

33. Apparatus according to any one of claims 27 to 32, wherein the source of water comprises a store of the water containing no more than 1 ppm gas.

34. Apparatus according to any one of claims 27 to 33, wherein the source of water comprises equipment for de-gassing water to a level of no more than 1 ppm gas.

25

35. Apparatus according to any one of claims 27 to 34, which includes a source of non-aqueous solvent and a dispenser for applying the non-aqueous solvent to the surface.

36. Apparatus according to claim 35, wherein one dispenser is used for applying the water and the non-aqueous solvent.

30

37. Apparatus according to claim 35 or 36, wherein the source of the non-aqueous solvent comprises a store of the non-aqueous solvent.

- 26 -

38. Apparatus according to any one of claims 35 to 37, wherein the source of non-aqueous solvent comprises equipment for de-gassing non-aqueous solvent to a level of no more than 10 ppm gas.
